DETAILED ACTION

Drawings

1. The proposed drawing correction and/or the proposed substitute sheets of drawings, filed on 09/29/00 have been missing. A proper drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The correction to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-3, 6 and 8, are rejected under 35 U.S.C. 102(b) as being anticipated by McNair et al. (US Patent 5,595,342.

Regarding claims 1, 3 and 8, McNair et al. disclose a management system for a building or for one or more rooms in a building (see col.5 lines 1-40), having at least one control center and at least two components connected to the control center by radio, the control center receiving signals from the components or transmitting signals to the components (see fig.14 and col.7 lines 40-60).

McNair et al. further disclose the signals being transmitted within a prescribed range (54), wherein the signals are transmitted at at least two different frequencies within the frequency range (54), at least one of these frequencies being outside the

Art Unit: 2684

partial frequency range (55) of the frequency range (54), (see fig.3). which reads on the above limitation with broadest reasonable interpretation, i.e., channels 1 and 2 are defined in one group or range and channel 3 is another frequency group or range.

Regarding claims 2, 6, McNair et al. disclose the signals are transmitted in a temporally offset fashion at at least two different frequencies (see fig.3), the examiner interprets "frequency hopping" corresponds to "temporally offset".

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 4-5, 7 and 9-10, are rejected under 35 U.S.C. 103(a) as being unpatentable over McNair et al. and further in view of Bartel et al. (US Patent 5,898,230).

Regarding claims 4, 5 and 10, McNair et al. fail to disclose the frequency range in particular an ISM band, wherein the frequency range is between 433 MHZ and 434.79 MHZ.

Bartel et al. disclose the frequency range in particular an ISM band, wherein the frequency range is between 433 MHZ and 434.79 MHZ (see abstract). Therefore, It would have been obvious to one of ordinary skill in the art at the time the invention was

Art Unit: 2684

made to modify the system of McNair et al. with the above teaching of Bartel et al. in order to provide communication to be carried out in both a long distance and a close communication mode and where a variety of different signals are used.

Regarding claims 7 and 9, the modified McNair et al. disclose the frequency band is divided in any N channels and the switching interval is greater than a duration of communication protocol (see col.2 line 36 through col.3 line 19 and col.4 lines 45-59) reads on with reasonable broadest interpretation of channel width is 50 KHZ and scanning at a step interval of 10KHZ.

Conclusion

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tu Nguyen whose telephone number is (703) 305-3427. The examiner can normally be reached on Monday through Friday from 8:30 a.m. to 5:00 p.m.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's acting supervisor, MAUNG NAY A, can be reached at (703) 308-7749.
